

Decentralized Liquidity Program (DLP)

Decentralized Liquidity Program(DLP) is a sub-project of XPChain for the continuous growth of XPChain project. All funds raised through DLP token are used for liquidity supply and fund management. The funds shall not be used for the operation of the foundation or for the wages of executives and employees, and there is no DLP token allocated to the foundation or its employees. Foundation and company operating DLP tokens and all funds receive only revenue from fund management. The funds raised through DLP are used to supply liquidity using its own liquidity operation bots for excellent blockchain projects, including XPC, and are used for quant programs (arbitrage, and so on). The generated profit is transparently disclosed, and distributed to DLP token holders, foundations, and partners, and some of the revenue is used for XPC and DLP token buybacks.

DLP Token Information

- ▷ Blockchain : Klaytn (KIP-7)
- ▷ Total Supply : 1,000,000,000 DLP
- ▷ Circulating Supply : 50,000,000 DLP (1st Stage)
- ▷ No Foundation Token, No Founder Token
- ▷ All funds that sell tokens are used for asset management
- ▷ Reserve tokens can be used for exchange listings and events (e.g., Airdrop for XPC holders)

Use of Asset Operating Profit

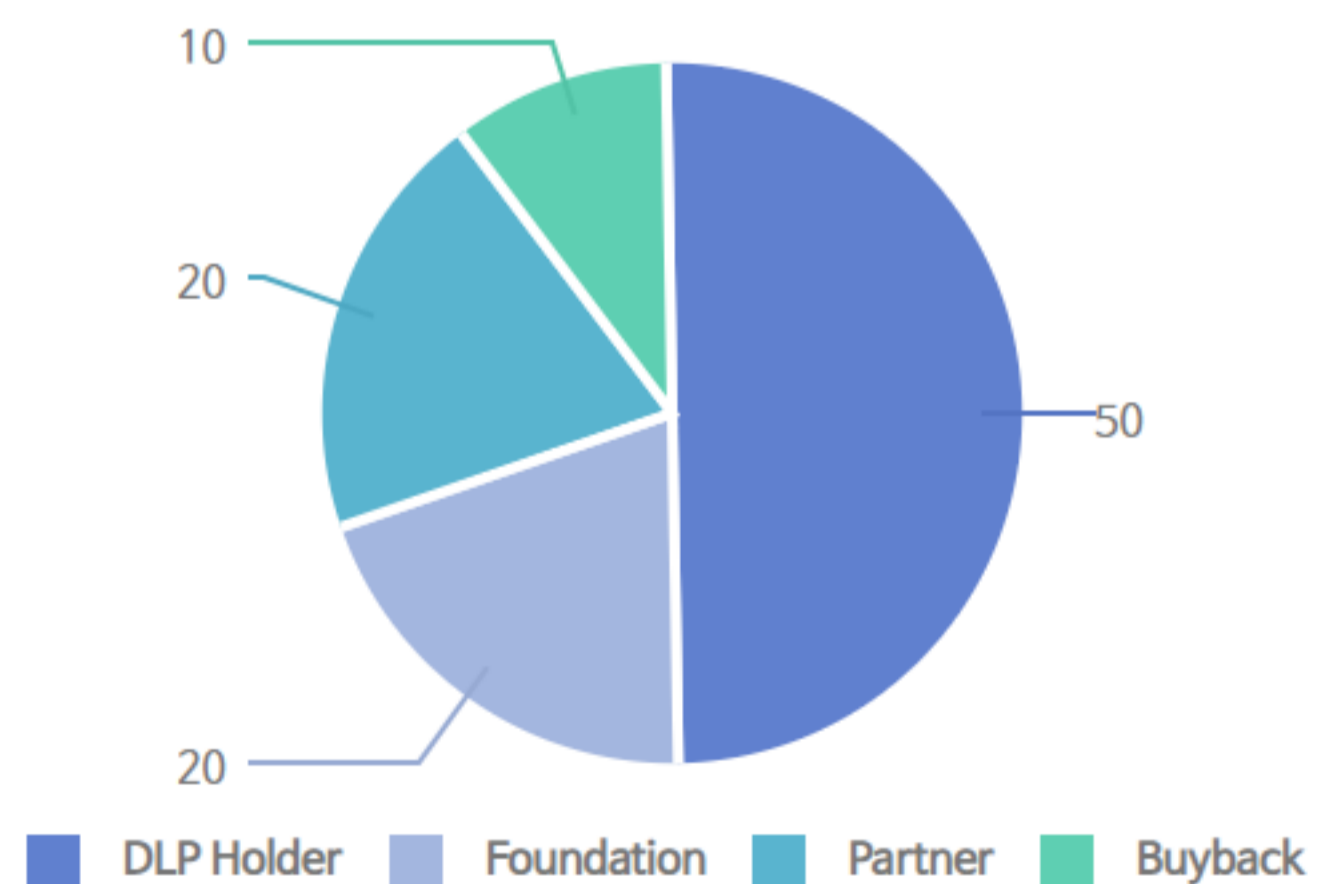

▷ Funds to sell DLP tokens will be used to supply liquidity and make investments in algorithms in excellent blockchain projects.

▷ The profit generated from the operation of the funds will be transparently distributed, either directly to the DLP holders or indirectly through the buyback.

▷ The Foundation does not directly use the funds that sold the token, but may only use 20% of the profits from operating the funds that sold the token as operating expenses for the Foundation.

▷ 20% of the profit can be paid to partners at exchange-linked cost, marketing cost, and trading fees.

▷ Because DLP is a sub-project of XPChain, 10 % of the profit is used for XPC buybacks.

DLP project is designed to overcome the limitations of existing blockchain and maximize user usability by using Klaytn blockchain(Korean top blockchain project), and make DLP tokens easy to participate in investments in excellent blockchain projects. In addition, DLP project is launched for the revival of XPChain and aims to develop the blockchain industry through transparent operation and excellent project discovery and investment.
